

ASX / TSX ANNOUNCEMENT

24 April 2017

Further VAT receipt and release of Standby Letters of Credit

Orocobre Limited (ORE:ASX, ORL:TSX) (**Orocobre** or the **Company**) wishes to provide an update on the receipt of VAT and release of additional cash security deposits which back Sales de Jujuy S.A.'s ("SDJ") working capital facility in Argentina.

VAT

As the Company advised on 3 April 2017, the process of VAT recovery has accelerated.

Approximately US\$4.4M of additional VAT refunds were received by SDJ last week.

Taking into account VAT received over the past year, including the amount received last week, approximately US\$17.1M of VAT refunds have been received by SDJ to date. All VAT claims through to, and inclusive of, December 2016 have now been received.

Further claims of approximately US\$4M relating to January and February 2017 have been submitted to the Argentine tax authorities.

Refund amounts in US\$ are quoted as approximate given they are Argentine Peso denominated.

Release of Standby Letters of Credit

SDJ repaid US\$2M of its working capital facility last week resulting in a release of Standby Letters of Credit (SBLCs) of US\$2M on a 100% basis. Orocobre's portion of this release is US\$1.45M.

The release of the above-mentioned SBLCs as well as guarantees as advised in prior announcements has supplemented Orocobre Group's available cash by US\$7.7M.

About Orocobre Limited

Orocobre Limited is listed on the Australian Securities Exchange and Toronto Stock Exchange (ASX:ORE) (TSX:ORL), and is building a substantial Argentinian-based industrial chemicals and minerals company through the construction and operation of its portfolio of lithium, potash and boron projects and facilities in the Puna region of northern Argentina. The Company has built, in partnership with Toyota Tsusho Corporation and JEMSE, the first large-scale, greenfield brine based lithium project in approximately 20 years at the Salar de Olaroz with planned production of 17,500 tonnes per annum of low-cost lithium carbonate.

The Olaroz Lithium Facility has a low environmental footprint because of the following aspects of the process:

- The process is designed to have a high processing recovery of lithium. With its low unit costs, the process will result in low cut-off grades, which will maximise resource recovery.
- The process route is designed with a zero liquid discharge design. All waste products are stored in permanent impoundments (the lined evaporation ponds). At the end of the project life the ponds will be capped and returned to a similar profile following soil placement and planting of original vegetation types.
- Brine is extracted from wells with minimum impact on freshwater resources outside the salar. Because the lithium is in sedimentary aquifers with relatively low permeability, drawdowns are limited to the salar itself. This is different from halite hosted deposits such as Salar de Atacama, Salar de Hombre Muerto and Salar de Rincon where the halite bodies have very high near surface permeability and the drawdown cones can impact on water resources around the Salar affecting the local environment.
- Energy used to concentrate the lithium in the brine is solar energy. The carbon footprint is lower than other processes.
- The technology developed has a very low maximum fresh water consumption of <20 l/s, which is low by industry standards. This fresh water is produced by reverse osmosis from non-potable brackish water.
- Sales de Jujuy S.A. is also committed to the ten principles of the sustainable development framework as developed by The International Council on Mining and Metals. The company has an active and well-funded "Shared Value" program aimed at the long term development of the local people.

The Company continues to follow the community and shared value policy to successfully work with suppliers and the employment bureau to focus on the hiring of local people from the communities of Olaroz, Huancar, Puesto Sey, Pastos Chicos, Catua, Susques, Jama, El Toro, Coranzulí, San Juan and Abrapampa. The project implementation is through EPCM (Engineering, Procurement and Construction Management) with a high proportion of local involvement through construction and supply contracts and local employment. The community and shared value policy continues to be a key success factor, training local people under the supervision of high quality experienced professionals.

The Company also wholly-owns Borax Argentina, an important regional borate producer.
